

# Company Profile

**0800 955 6303**

**[www.foxsecuritysolutions.co.uk](http://www.foxsecuritysolutions.co.uk)**

**Dedicated to keeping you and your property safe**

**• Access Control • CCTV • Door Entry • Intruder Alarms •**

FSS offer a comprehensive design and installation service for the supply of:

### Intruder Alarm

Intruder alarms are the most popular form of commercial and home security systems. We at Fox Security Solutions are able to provide, install and maintain a number of systems so you do not have to worry about a thing. Security weak spots such as windows, doors and garages can all be protected. Options include:

- Hard-wired systems
- Wireless systems
- A dialler in the system to call a list of priority numbers such as your mobile, upon the alarm being triggered
- A system that is connected to a Central Station where the police or private monitoring company are called upon the alarm being triggered
- Personal attack alarm
- Shock detectors on windows for particularly vulnerable buildings

### CCTV

CCTV is an ideal way to further protect your property, be it residential or commercial.

- It increases protection and acts as a further deterrent for your property
- Images can be viewed remotely by yourself from a chosen location
- Allows you to record and playback and provide evidence if needed
- Can be positioned both externally and internally

FSS offer a comprehensive design and installation service for the supply of:

### Access Control

Access Control is quite simply how you control other people's access to your property. An access control point can be an external gate or door, or an internal door. Access is controlled through either a magnetic lock or electric strike and can be controlled using either a fob or keypad. It is a highly versatile means of protecting your property and can be used in conjunction with entryphones.

- You can control who has access to your property, and the times they can access your property
- Internal access can be managed by programming fobs to allow certain staff into specified areas
- Monitor the movement of your staff
- When combined with an entryphone, it allows you to view visitors, speak to them and have control over their access to your home by 'buzzing' them in or not
- Protects you from unwelcome and unexpected bogus callers, allowing you to deal with them without having to open the door
- Can be integrated into monitored home or business protection systems
- A keypad or a fob system at an entrance gate controls who has access to your property

### Door Entry

FSS recognises that as well as offering cost effectiveness within a competitive marketplace, there is also a need to maintain the highest standards of customer service. All FSS employees are totally committed to quality and work to the highest standards in all areas.

## Service and Maintenance

Our company provides a comprehensive maintenance and servicing facility to systems we have installed as well as installations from other security companies. This offers total reassurance and peace of mind backed up by a 24hr emergency call out service from our trained and experienced service and maintenance engineers.

FSS can tailor a flexible contract to meet each customer's individual requirements for preventive maintenance, full service and emergency service.
